

Translate thorns character by different material

Actor to Investigate

Fruit

I use different material to make different feeling. I hope the feeling can be reflect the thorns character. I recorded the different kinds of scratches and the sounds that were made during the cutting.

Very sharp spines, Easy cut skin of tomato

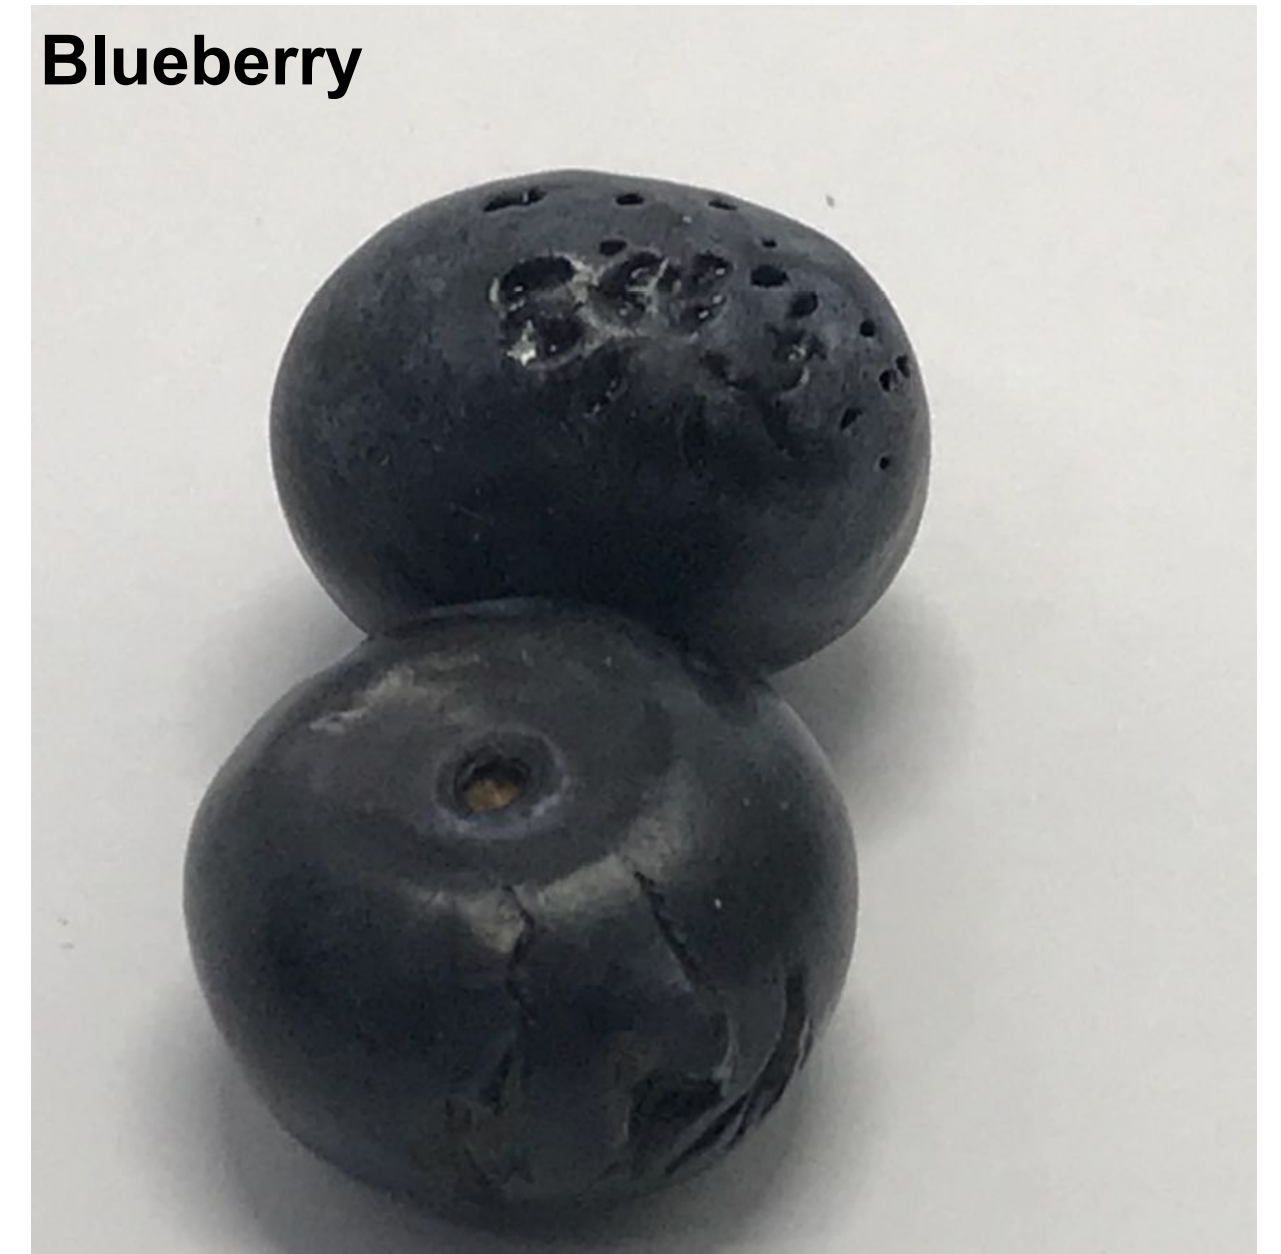

stamp

Jujube

Blueberry

Foam

Hook objects

Balloon

Pain&Squeal

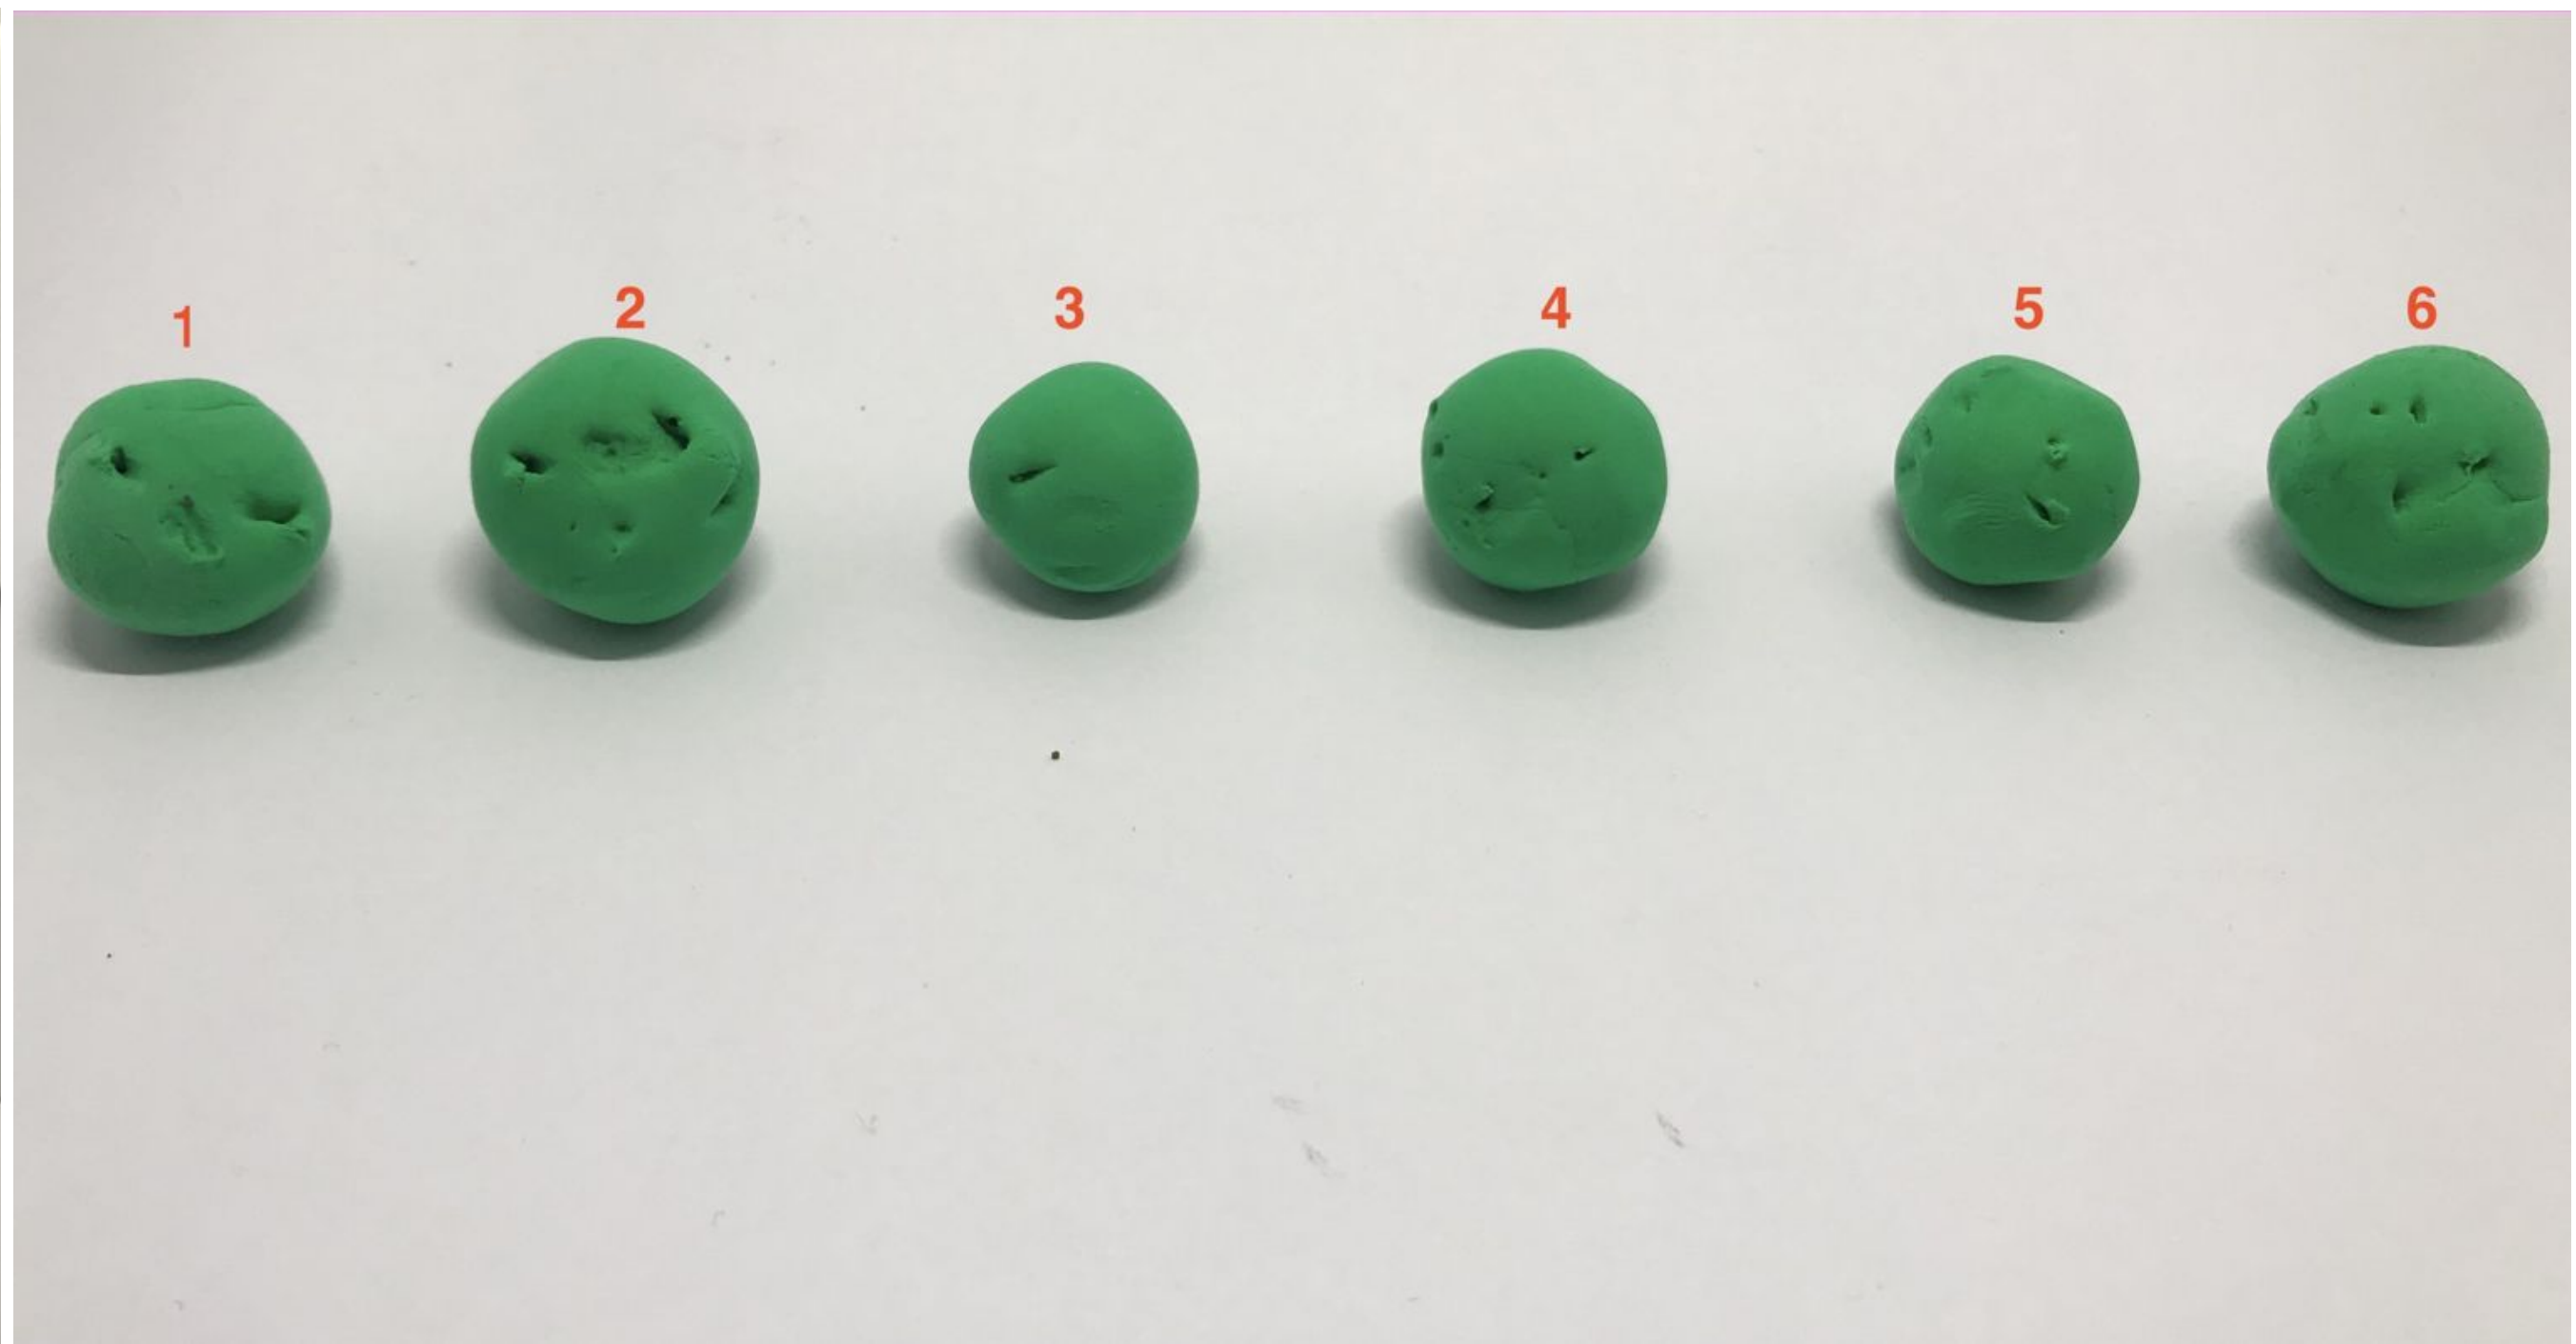

Water Balloon

Blood Flow

Clay

The younger the branch, the deeper the hole made by the spines

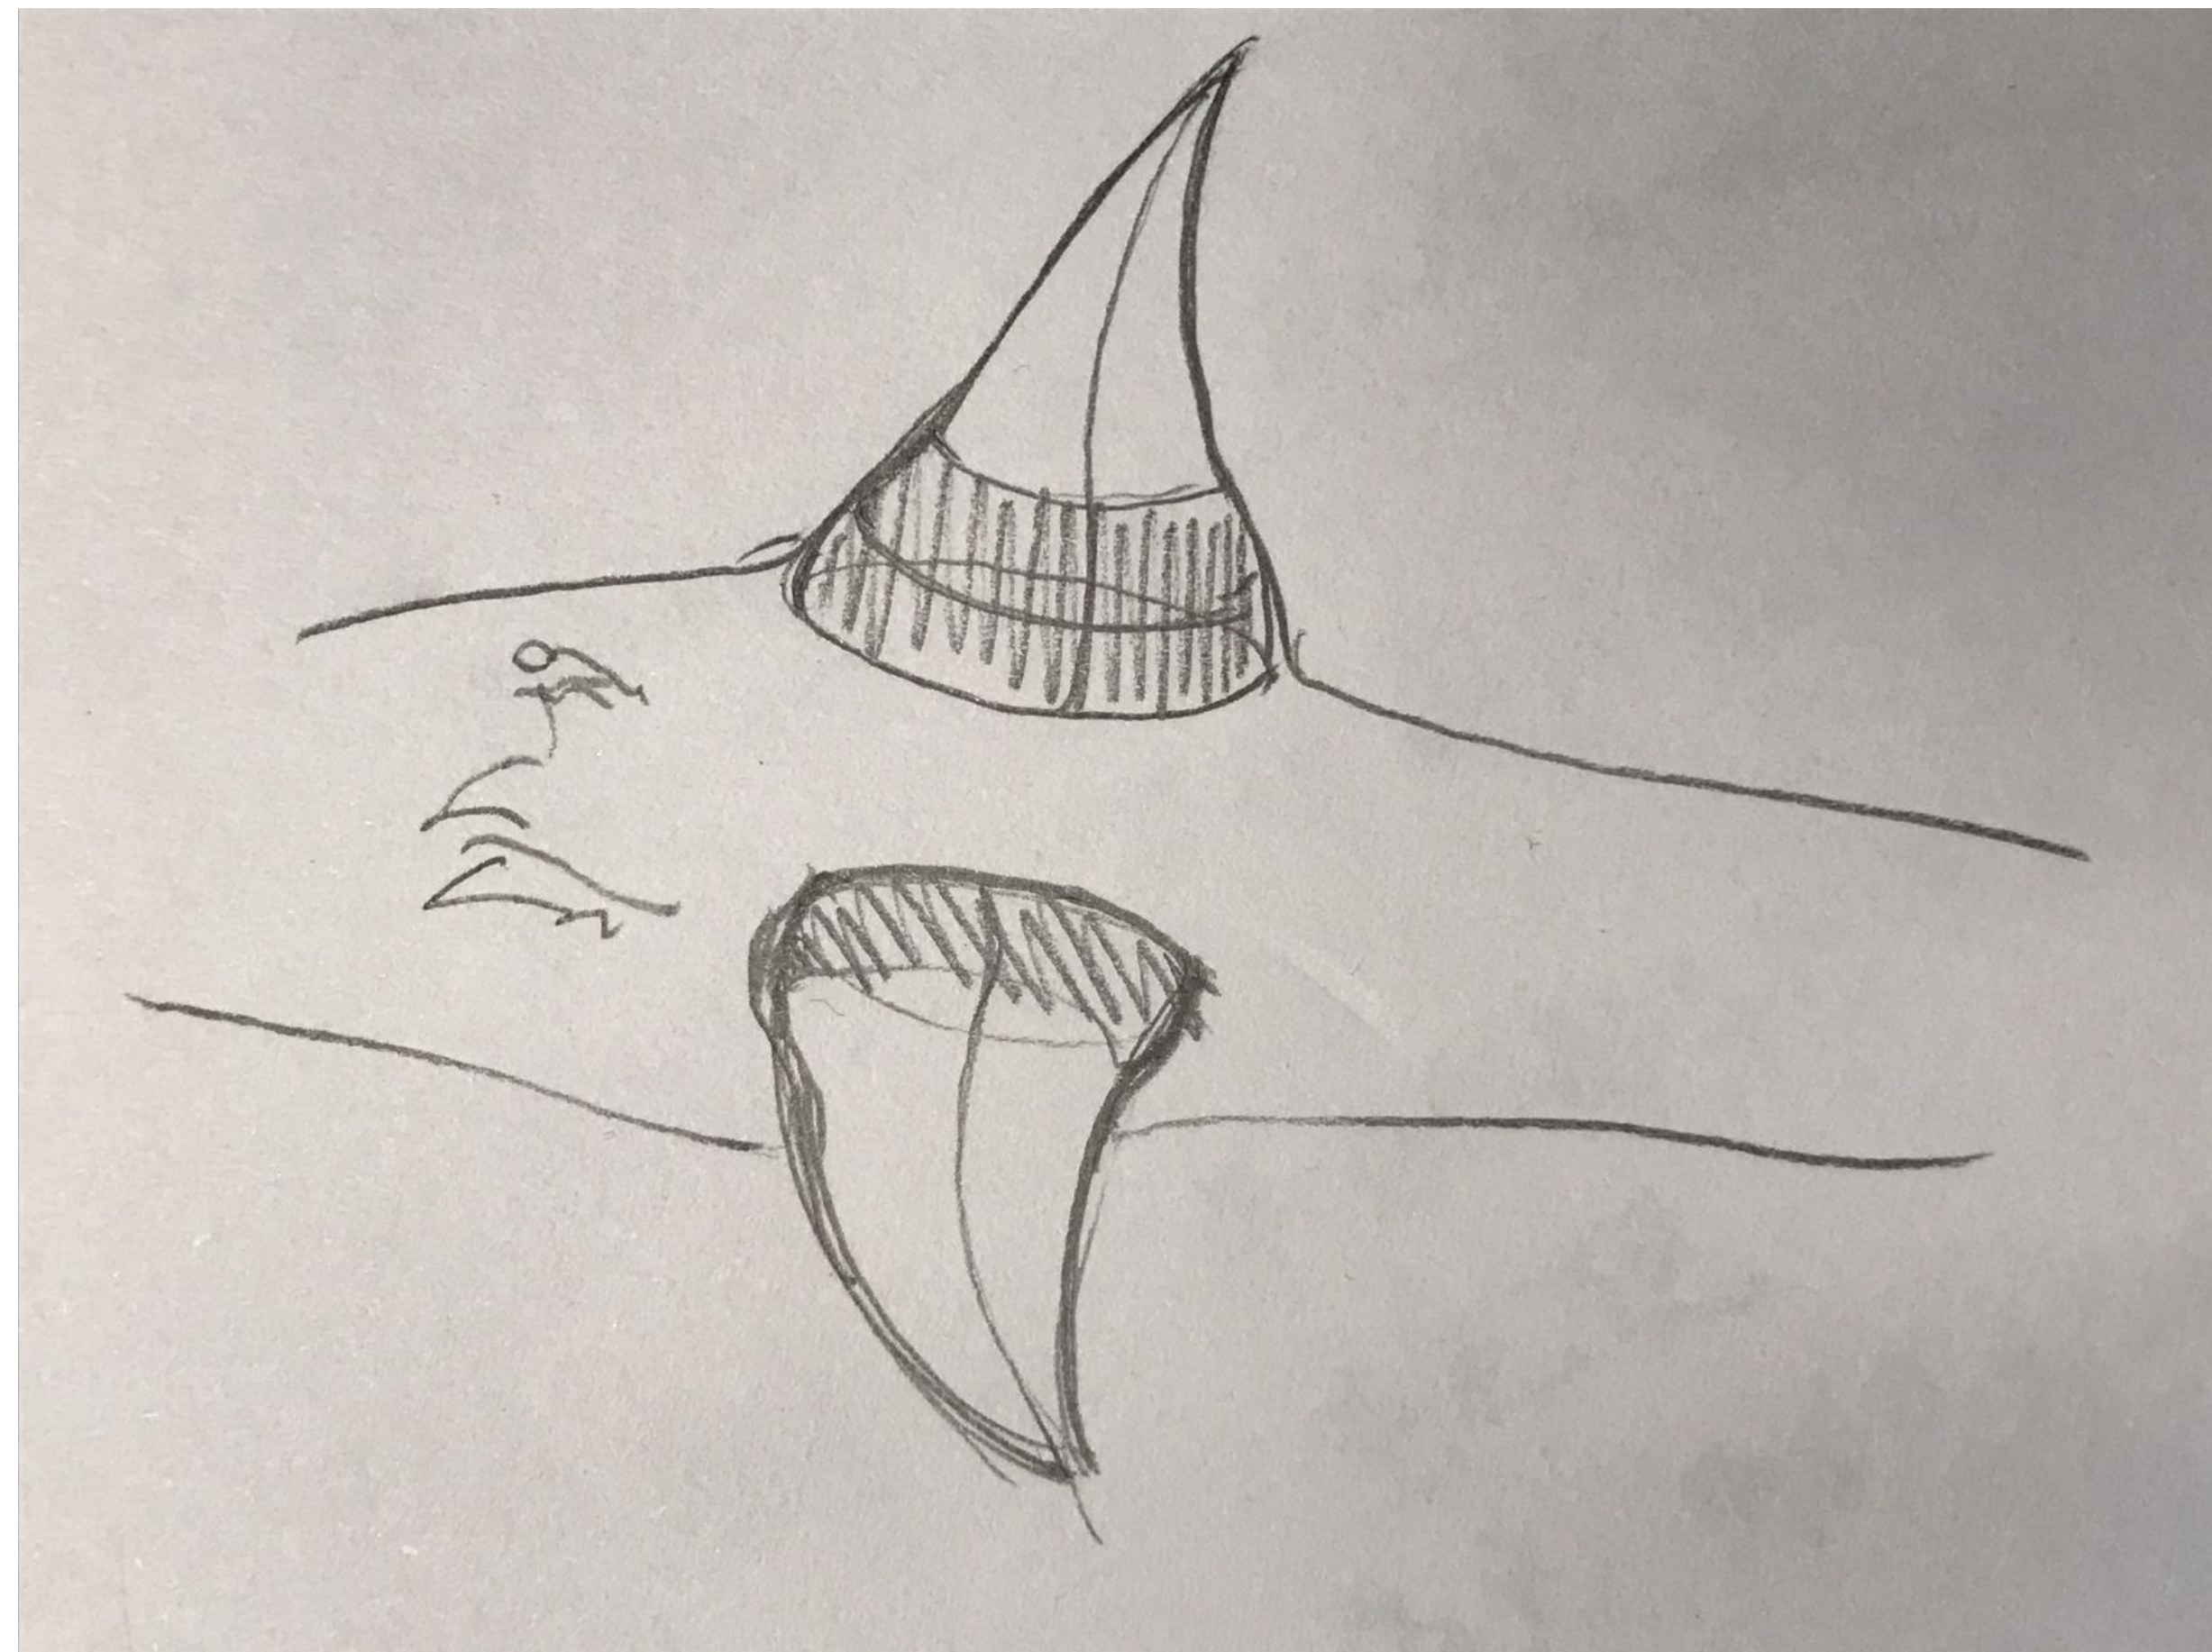

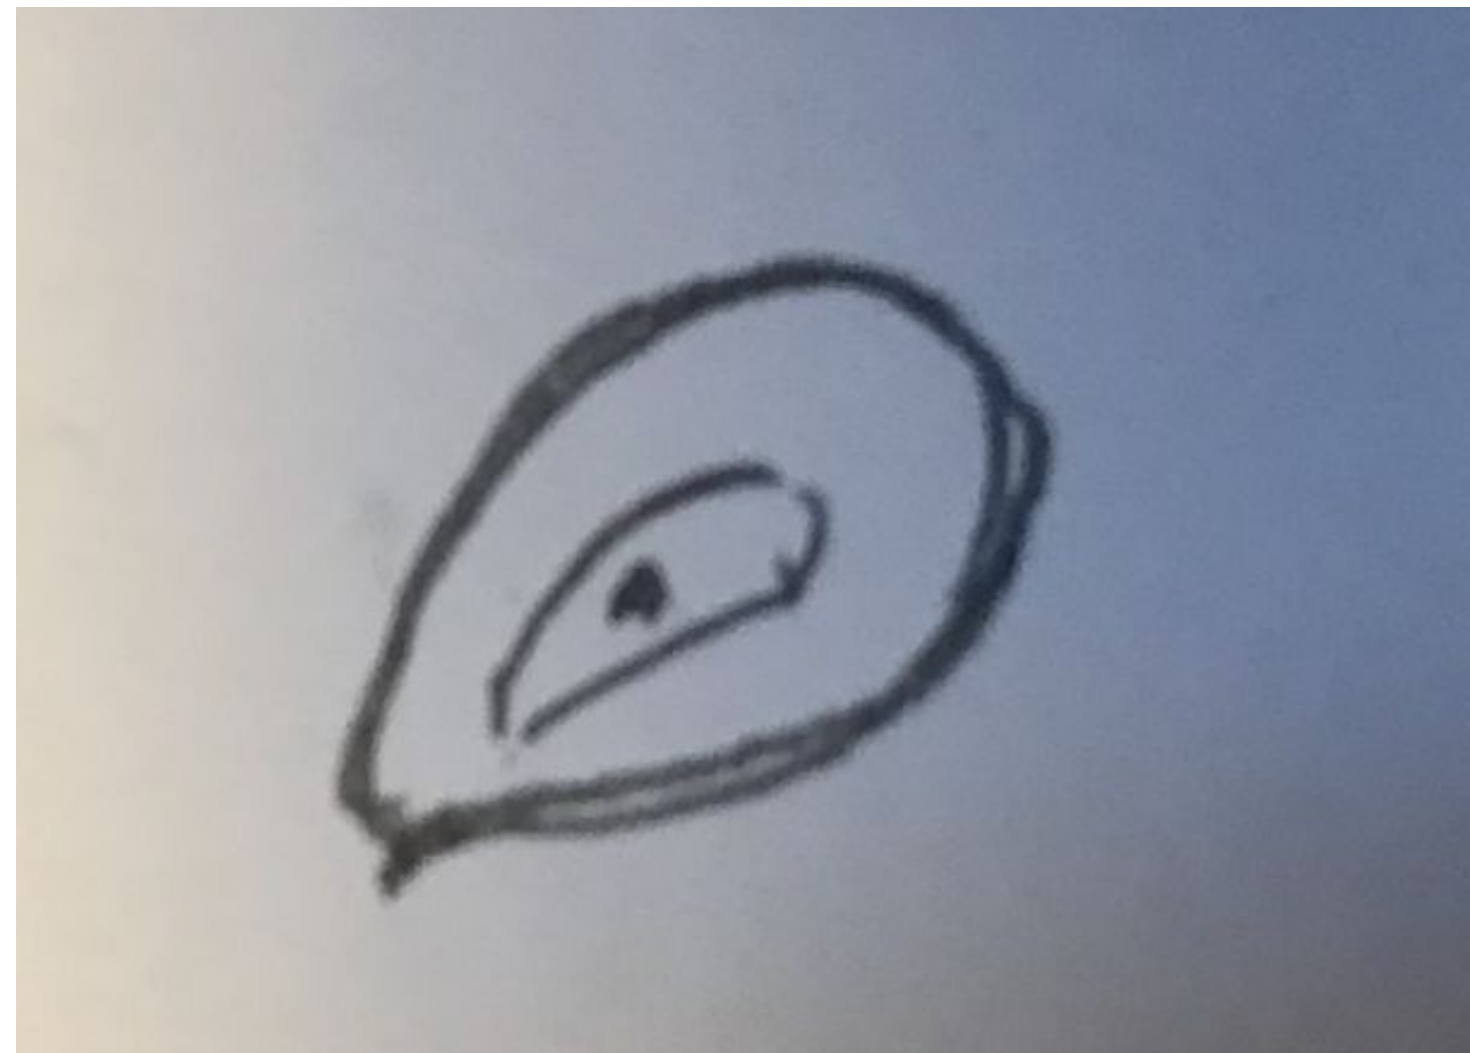

The tree's thorns

It's almost impossible to break it. Use scissors if you want to break it.

The structure of the thorn makes it difficult to break. The base of the spines is huge.

The thorns have a little curve, can easily hook objects.

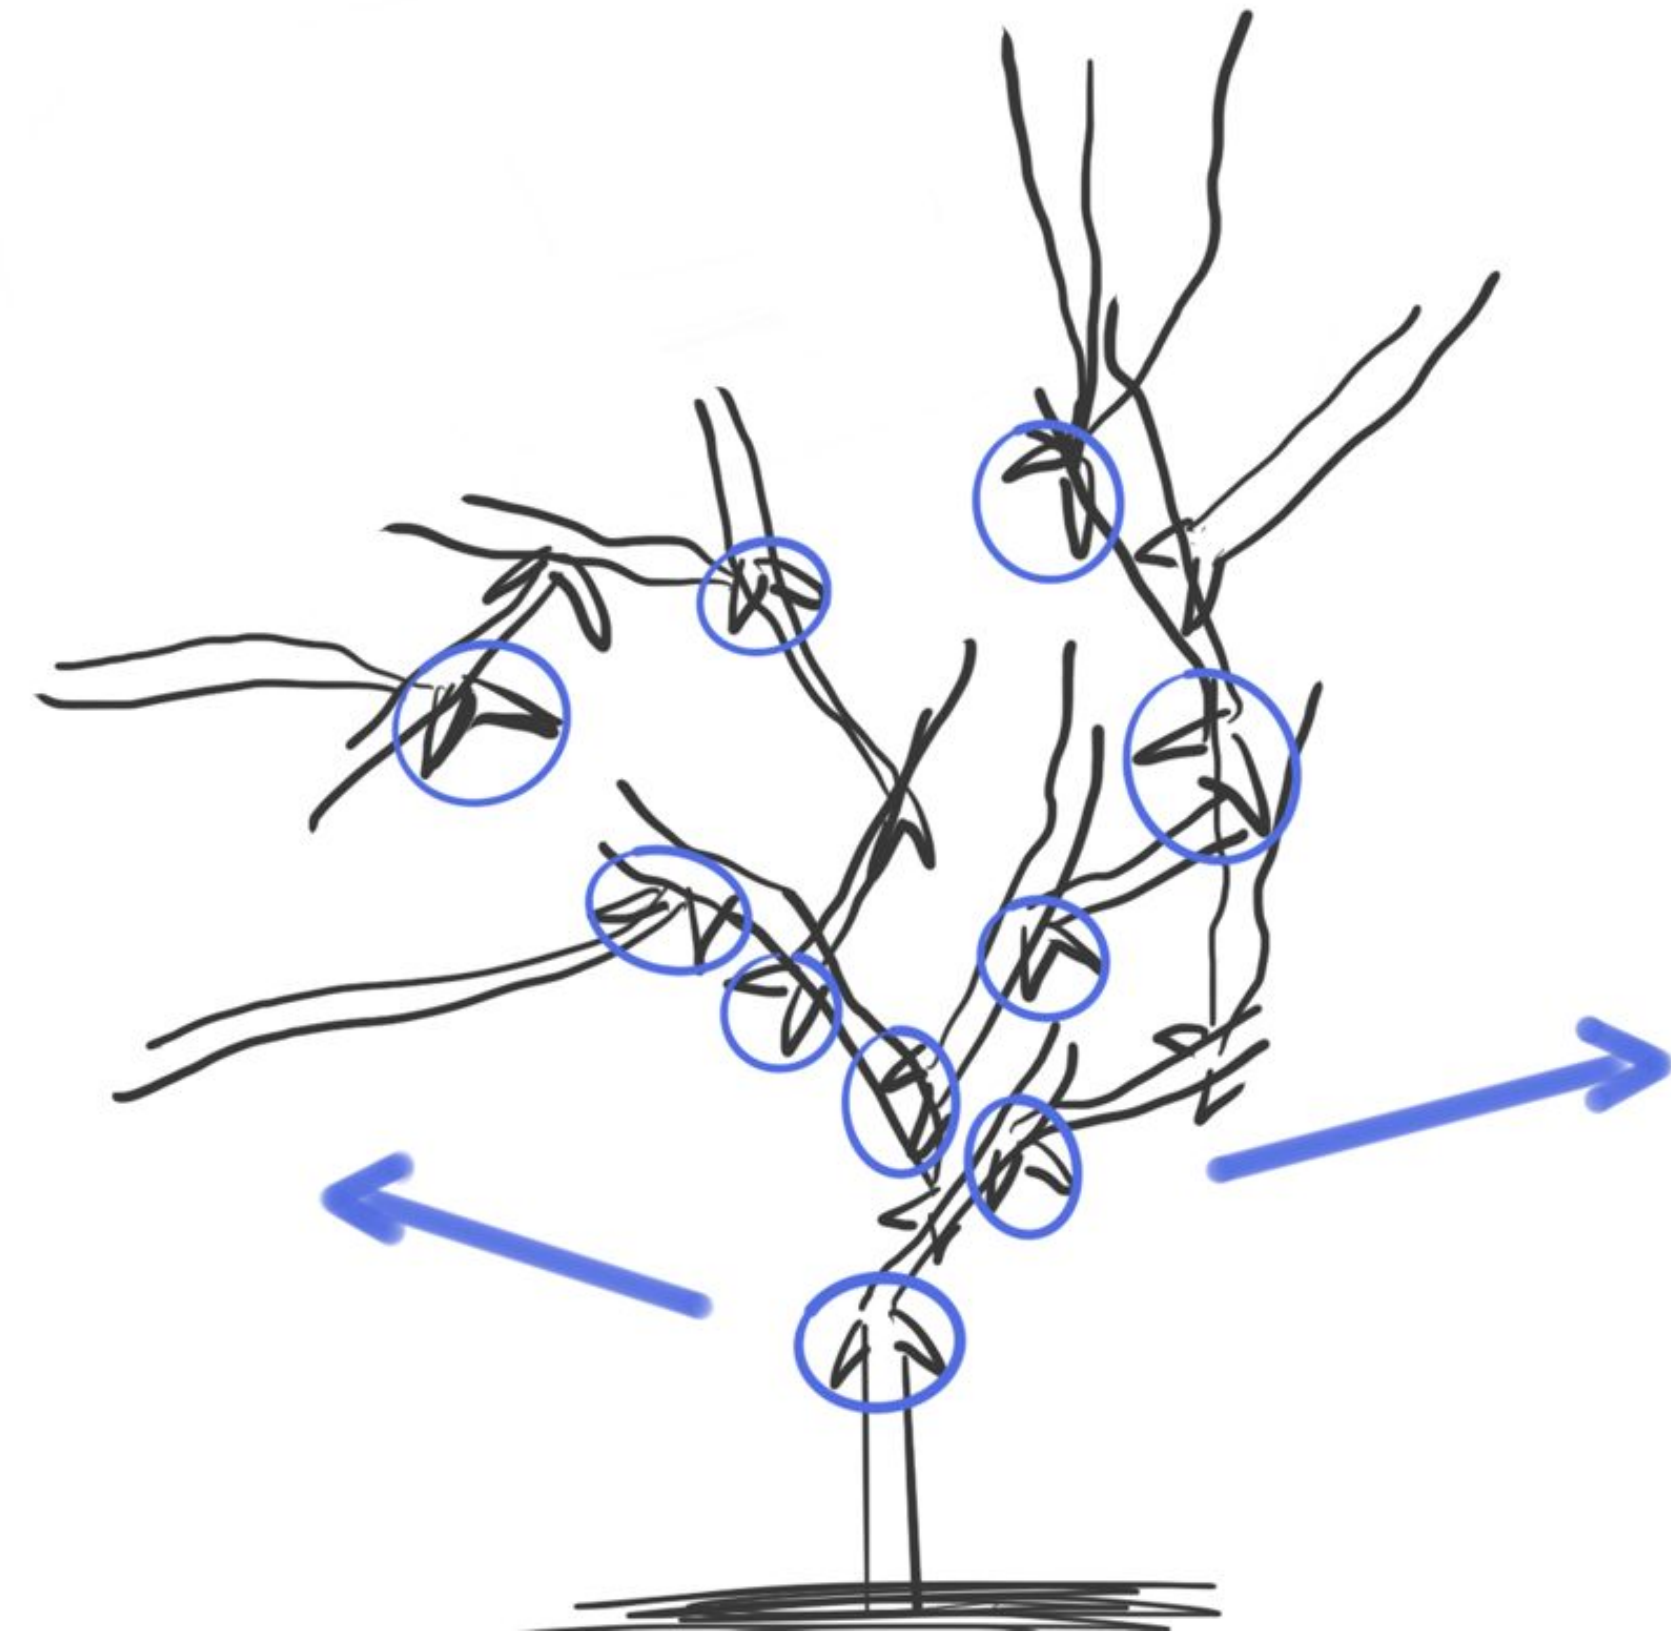

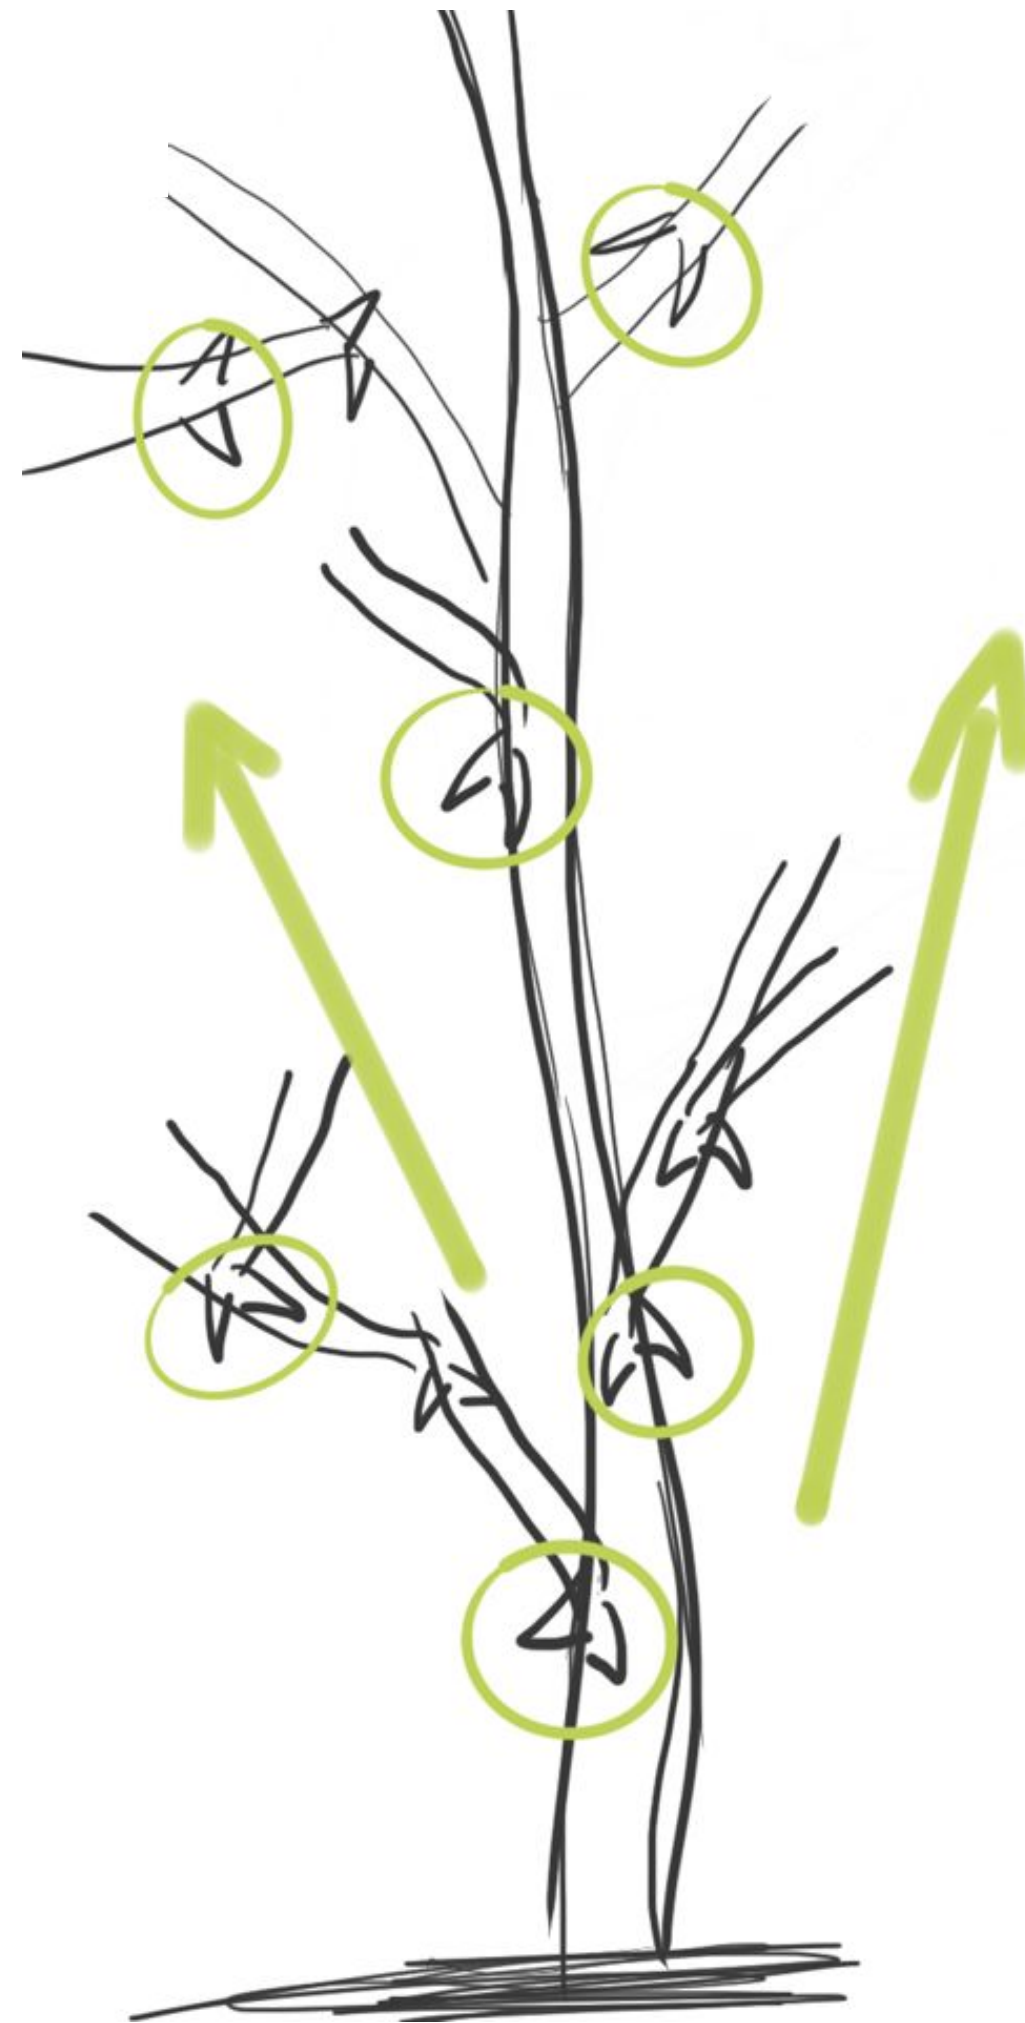

Growing Trend

Again Observation, I thought the tendency for trees to grow was to go up as a whole.

Like most trees

In fact, the tree like shrubs, It actually grows laterally. The presence of thorns makes it aggressive.

Combine with growing and thorns structure

In the near future, the tree is likely to surround the entire neighborhood and form a wall.

I think it's a good thing that the prickly thorns of the tree haven't evolved the ability to climb walls, otherwise it might invade indoors
