

Drawing Out Rituals

Walk to my Cousin's home

Step1

Raise the foot to change the shoe, I usually wear this pair without shoe cord. Because then I don't have to bend over. In this step, I **usually wiggle my foot** wildly and then **tuck it into the shoe**. I do a little **bit of wiggling**, just to **keep my balance**.

Step2

Pick up the key

Step3

Turn on the light before you go out

Step4

Start to open the door

Step5

Press the elevator to the ground floor

Step6

Hold the zipper with one hand and the other hand pulls the chain. Put both hands on the brim of the hat and button it on.

Step7-1

Count the brand — — 1

My eyes are level and my head is slightly raised. Saying silently that building 1 is here

Step7-2

Count the brand — — 2

Step7-3

Count the brand — — 9

Got home! Achieve achievements, 9 brands!

Step8-1

See the car

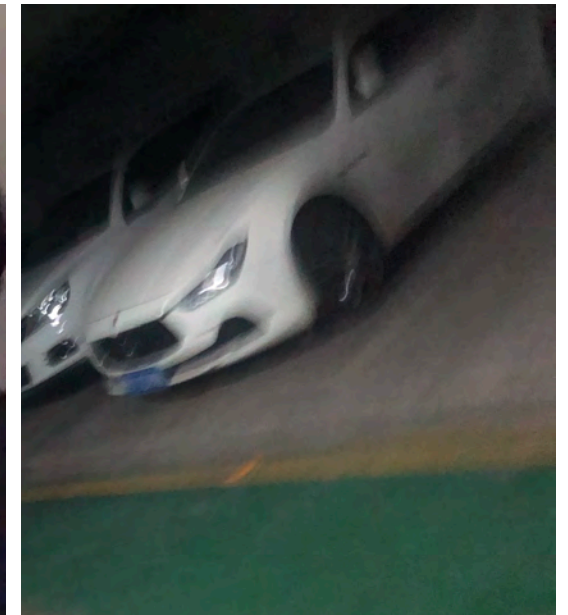

Actually, I was looking for the cat. Since I live in the north and it's cold outside, the cat will run from the ground to the garage and choose a car's engine cover to sit on to get warm.

Step8-2

looking for the cat...

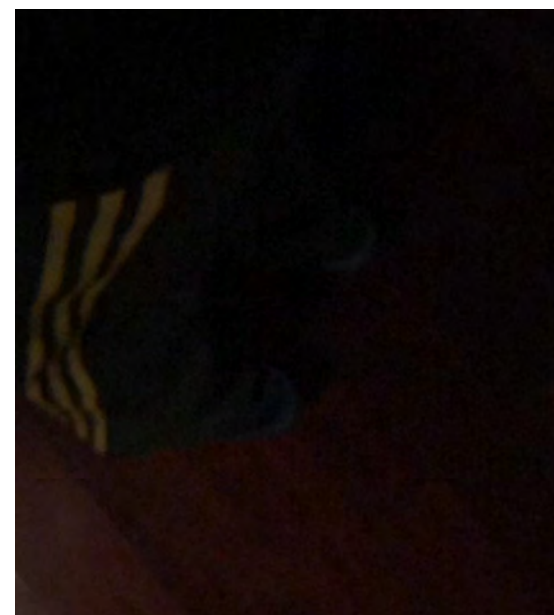

Bend over and look under the car, Look around the wheel, Make two meows like a cat

Step8-3

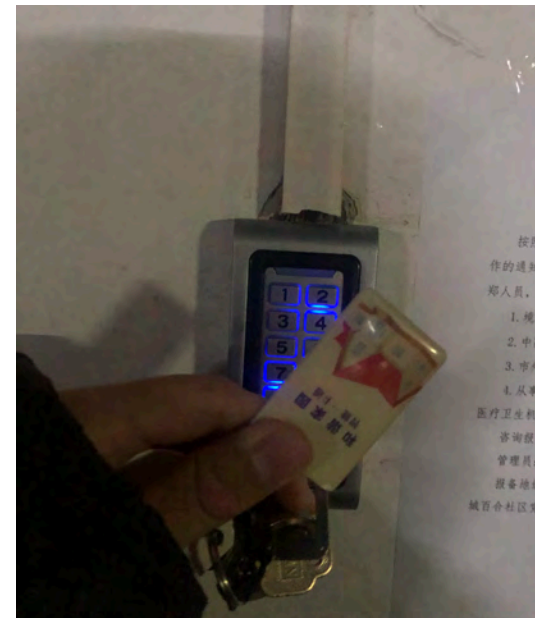

Tiptoe to look at the roof...Lean forward and try to lift your neck up, but usually not too hard because of the cold.

No cat, Bad luck today!

Step9-1

Entrance control of underground garage. Wait for the green light and the Bi~Bi~, and the door will open

Step9-2

Voice-activated lights, stomp your feet

Step9-3

The elevator must not press the wrong button. My cousin's family lives on the sixth floor of Building 9, and my family lives on the fourth floor of Building 1. I often press the wrong doorbell when I reach the fourth floor.

Recording

Leg

I try to emphasize that the repetitive actions in daily life are driven by **primitive instincts**, just like I don't want to bend over and tie my shoes. Perhaps the behavior driven by instinct did not achieve the original purpose of being **idle**, but to a certain extent it shows the desire for a dream lifestyle behind people's behavior.

我试图强调，日常生活中那些重复性动作背后是被原始的本能所驱使的，就犹如我穿鞋不想弯腰系鞋绳的惰性一样。或许本能驱使下的行为并没有达到原本偷懒的目的，但是在某种程度上它展示了人们行为背后对理想生活方式的渴望。

Leg language

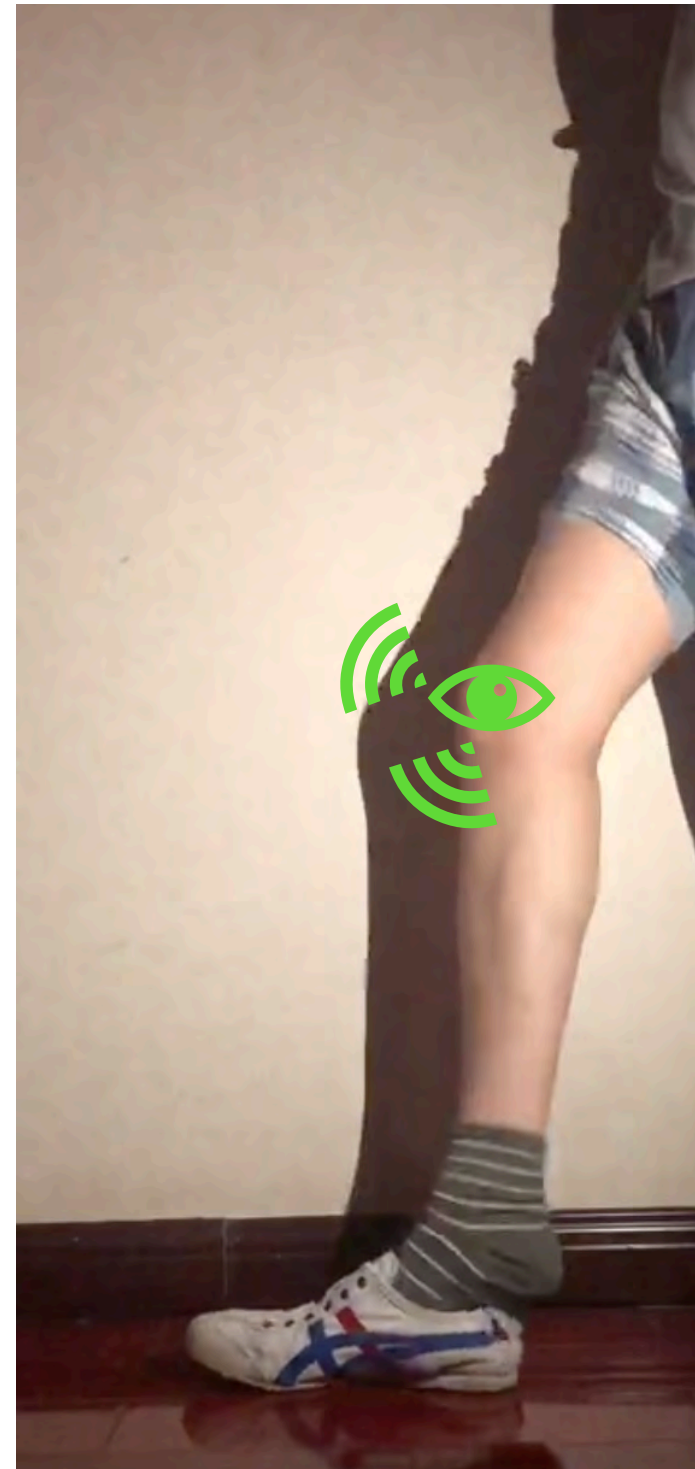

I think: daily movements are not just repetitive and boring physical behaviors. It includes:

- Very specific **instinct** on the body without shoes.
- A new **experience** of looking at the surrounding environment after changing the angle of view (imagine your eyes grow in your knees)

我认为：日常动作并非只是重复且无聊的肢体行为。它包括了：

—不用手穿鞋的本能。

--更换视角后看周围环境的新体验（想象一下你的眼睛长在了膝盖上）

Leg shadow

This week I'll continue to explore the meaning behind the move not to bend over and wear shoes.

I recorded the shadow of leg movement while wearing shoes. Shadows are projected on the wall, forming a two-dimensional picture, and the wall becomes the new canvas

In the video I reassemble the sound I make when I wear shoes to make it more rhythmic.

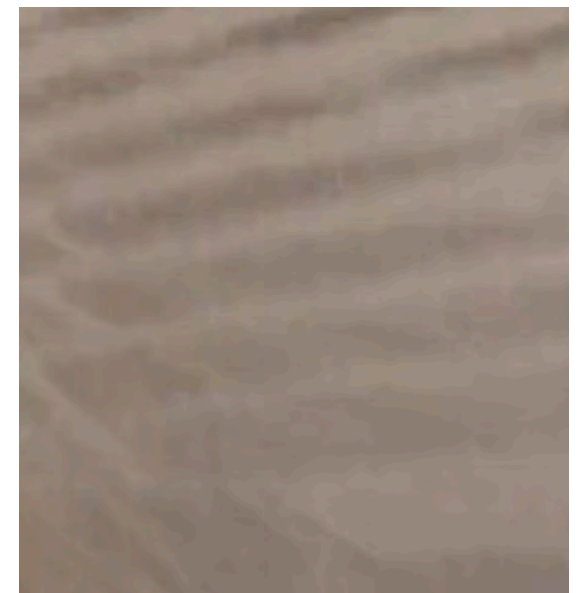

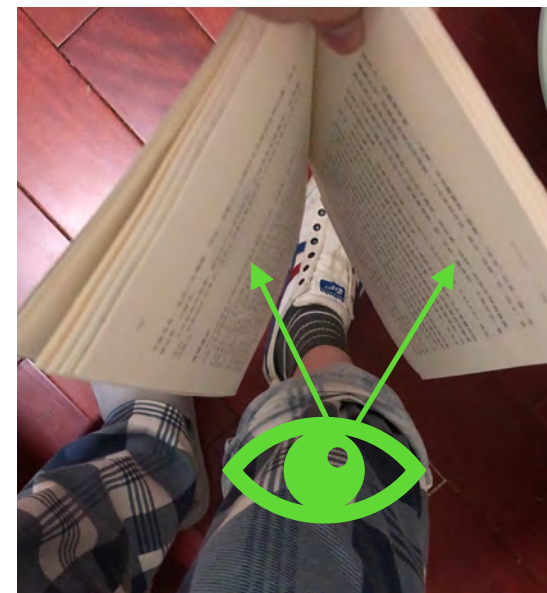

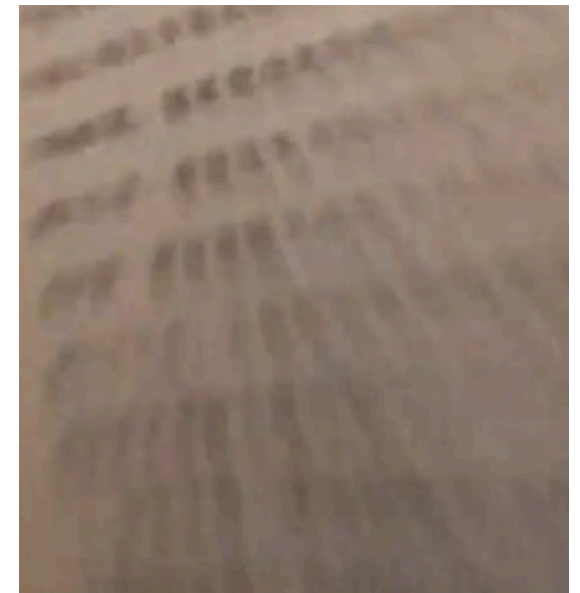

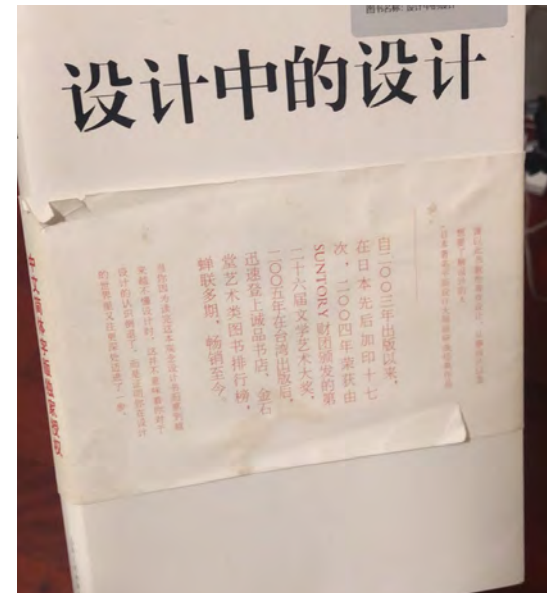

Leg Reading

And that part of it is thinking about what happens if you look down and you look at your surroundings from the perspective of your knees.

这部分即是思考如果视线下降，从膝盖的视角去看周围环境，会发生什么呢？

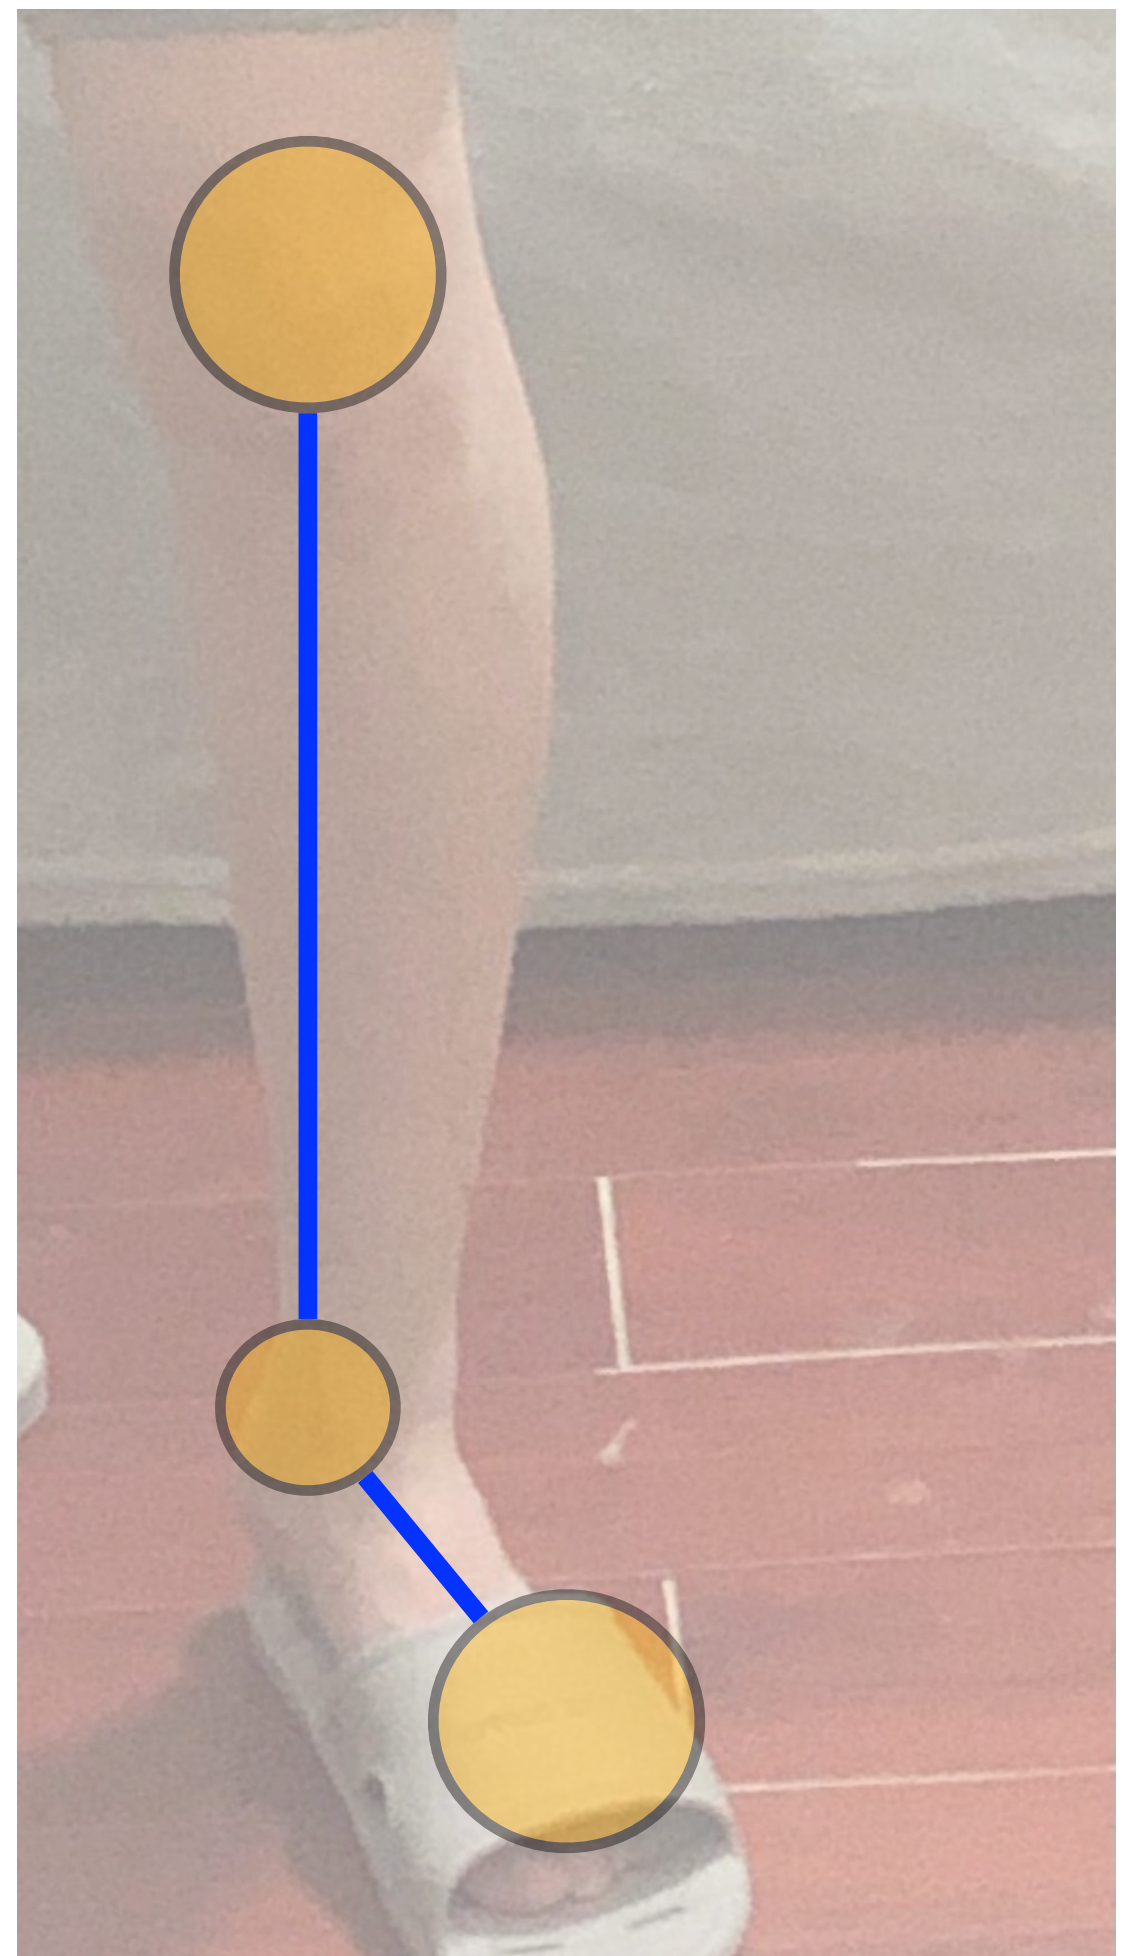

When my legs began to read the
